

SuSE™ Linux System Administration Part 1

Course Overview

SuSE™ Linux is the possibly the oldest commercial Linux distribution available and with its recent takeover by Novell™, is finding its way into business, education and government. Due to its outstanding reliability and performance, SUSE™ Enterprise Linux is used extensively for file, database and web server applications.

The [SUSE™ Linux System Administration Part 1](#) course will allow delegates to manage user accounts; install software and hardware; access disk devices & boot-up and shut down systems.

Who should attend

Computer users who have attended the [UNIX & Linux Fundamentals](#) course or have equivalent knowledge and will be required to administer one or more multi-user SUSE™ Linux environments.
